STUDENT REGISTRATION APP

Main.dart

```dart
import 'package:flutter/material.dart';
import 'screens/registration_screen.dart';

void main() {
  runApp(const MyApp());
}

class MyApp extends StatelessWidget {
  const MyApp({super.key});

  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      title: 'Student Registration App',
      theme: ThemeData(primarySwatch: Colors.blue),
      home: const RegistrationScreen(),
      debugShowCheckedModeBanner: false,
    );
  }
}
```

registration_screen.dart

Step 1: Basic Form with Text Fields, Controllers & Validation

Code:

```dart
import 'package:flutter/material.dart';

class RegistrationScreen extends StatefulWidget {
  const RegistrationScreen({super.key});

  @override
```

```
  State<RegistrationScreen> createState() => _RegistrationScreenState();
}

class _RegistrationScreenState extends State<RegistrationScreen> {
  final _formKey = GlobalKey<FormState>();

  final TextEditingController _nameController = TextEditingController();
  final TextEditingController _emailController = TextEditingController();
  final TextEditingController _phoneController = TextEditingController();
  final TextEditingController _passwordController = TextEditingController();

  @override
  void dispose() {
    _nameController.dispose();
    _emailController.dispose();
    _phoneController.dispose();
    _passwordController.dispose();
    super.dispose();
  }

  void _submitForm() {
    if (_formKey.currentState!.validate()) {
      ScaffoldMessenger.of(context).showSnackBar(
        const SnackBar(content: Text('Validation Successful!')),
      );
    }
  }

  @override
  Widget build(BuildContext context) {
    return Scaffold(
      appBar: AppBar(title: const Text('Student Registration - CP 1')),
      body: Padding(
        padding: const EdgeInsets.all(16.0),
        child: Form(
          key: _formKey,
          child: ListView(
            children: [
              TextFormField(
                controller: _nameController,
                decoration: const InputDecoration(labelText: 'Full Name'),
                validator: (value) => value == null || value.trim().isEmpty ? 'Enter name' : null,
              ),
              const SizedBox(height: 12),
              TextFormField(
                controller: _emailController,
                decoration: const InputDecoration(labelText: 'Email'),
                keyboardType: TextInputType.emailAddress,
```

```
              validator: (value) => value == null || !value.contains('@') ? 'Enter valid email' : null,
            ),
            const SizedBox(height: 12),
            TextFormField(
              controller: _phoneController,
              decoration: const InputDecoration(labelText: 'Phone Number'),
              keyboardType: TextInputType.phone,
              validator: (value) => value == null || value.length < 10 ? 'Enter 10-digit phone' :
null,
            ),
            const SizedBox(height: 12),
            TextFormField(
              controller: _passwordController,
              decoration: const InputDecoration(labelText: 'Password'),
              obscureText: true,
              validator: (value) => value == null || value.length < 6 ? 'Min 6 characters' : null,
            ),
            const SizedBox(height: 20),
            ElevatedButton(
              onPressed: _submitForm,
              child: const Text('Register'),
            ),
          ],
        ),
      ),
    ),
  );
 }
}
```

Output:

Step 2: Adding Radio Buttons for Gender & Checkboxes Skills

Code:

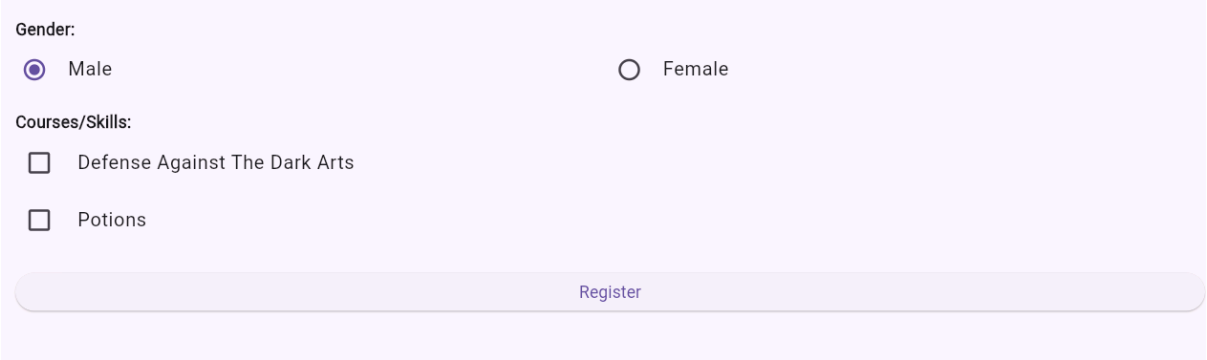

```
const SizedBox(height: 20),

        // Gender Selection using Radio Buttons
        const Text('Gender:', style: TextStyle(fontWeight: FontWeight.bold)),
        Row(
          children: [
            Expanded(
              child: RadioListTile<String>(
```

```
        title: const Text('Male'),
        value: 'Male',
        groupValue: _gender,
        contentPadding: EdgeInsets.zero,
        onChanged: (value) => setState(() => _gender = value!),
      ),
    ),
    Expanded(
      child: RadioListTile<String>(
        title: const Text('Female'),
        value: 'Female',
        groupValue: _gender,
        contentPadding: EdgeInsets.zero,
        onChanged: (value) => setState(() => _gender = value!),
      ),
    ),
  ],
),
const SizedBox(height: 10),

// Course/Skill Selection using Checkboxes
const Text('Courses/Skills:', style: TextStyle(fontWeight: FontWeight.bold)),
CheckboxListTile(
  title: const Text('Flutter Development'),
  value: _flutterSelected,
  controlAffinity: ListTileControlAffinity.leading,
  contentPadding: EdgeInsets.zero,
  onChanged: (value) => setState(() => _flutterSelected = value ?? false),
),
CheckboxListTile(
  title: const Text('Java Programming'),
  value: _javaSelected,
  controlAffinity: ListTileControlAffinity.leading,
  contentPadding: EdgeInsets.zero,
  onChanged: (value) => setState(() => _javaSelected = value ?? false),
),
```

Output:

Step 3: Adding a Slider for Age & Switch for Preferences

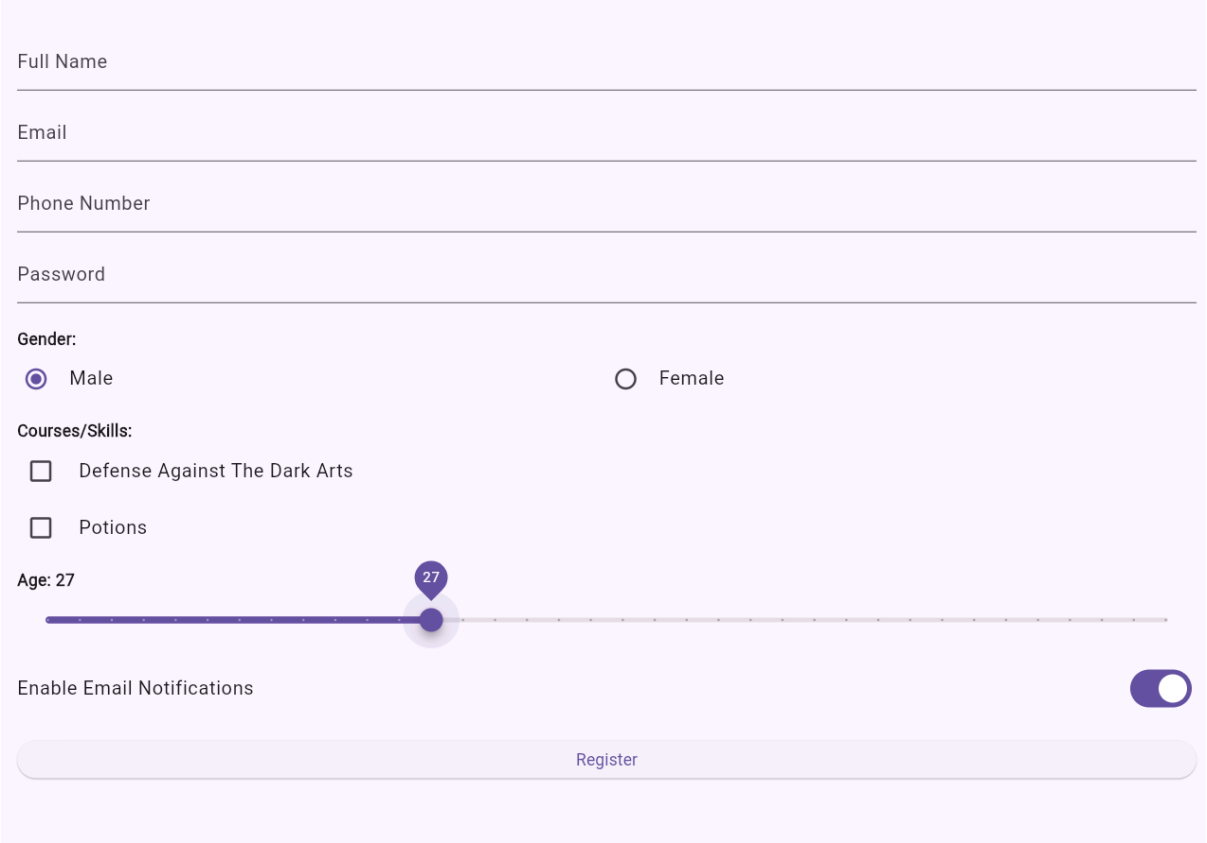

Code:

```
const SizedBox(height: 10),

        // Slider for Age selection
        Text('Age: ${_age.toInt()}', style: const TextStyle(fontWeight: FontWeight.bold)),
        Slider(
          value: _age,
          min: 15,
          max: 50,
          divisions: 35,
          label: _age.toInt().toString(),
          onChanged: (value) => setState(() => _age = value),
        ),
        const SizedBox(height: 10),

        // Switch for notifications toggle
        SwitchListTile(
          title: const Text('Enable Email Notifications'),
          value: _notificationsEnabled,
          contentPadding: EdgeInsets.zero,
          onChanged: (value) => setState(() => _notificationsEnabled = value),
        ),
```

Output:

Success_screen.dart

```
import 'package:flutter/material.dart';

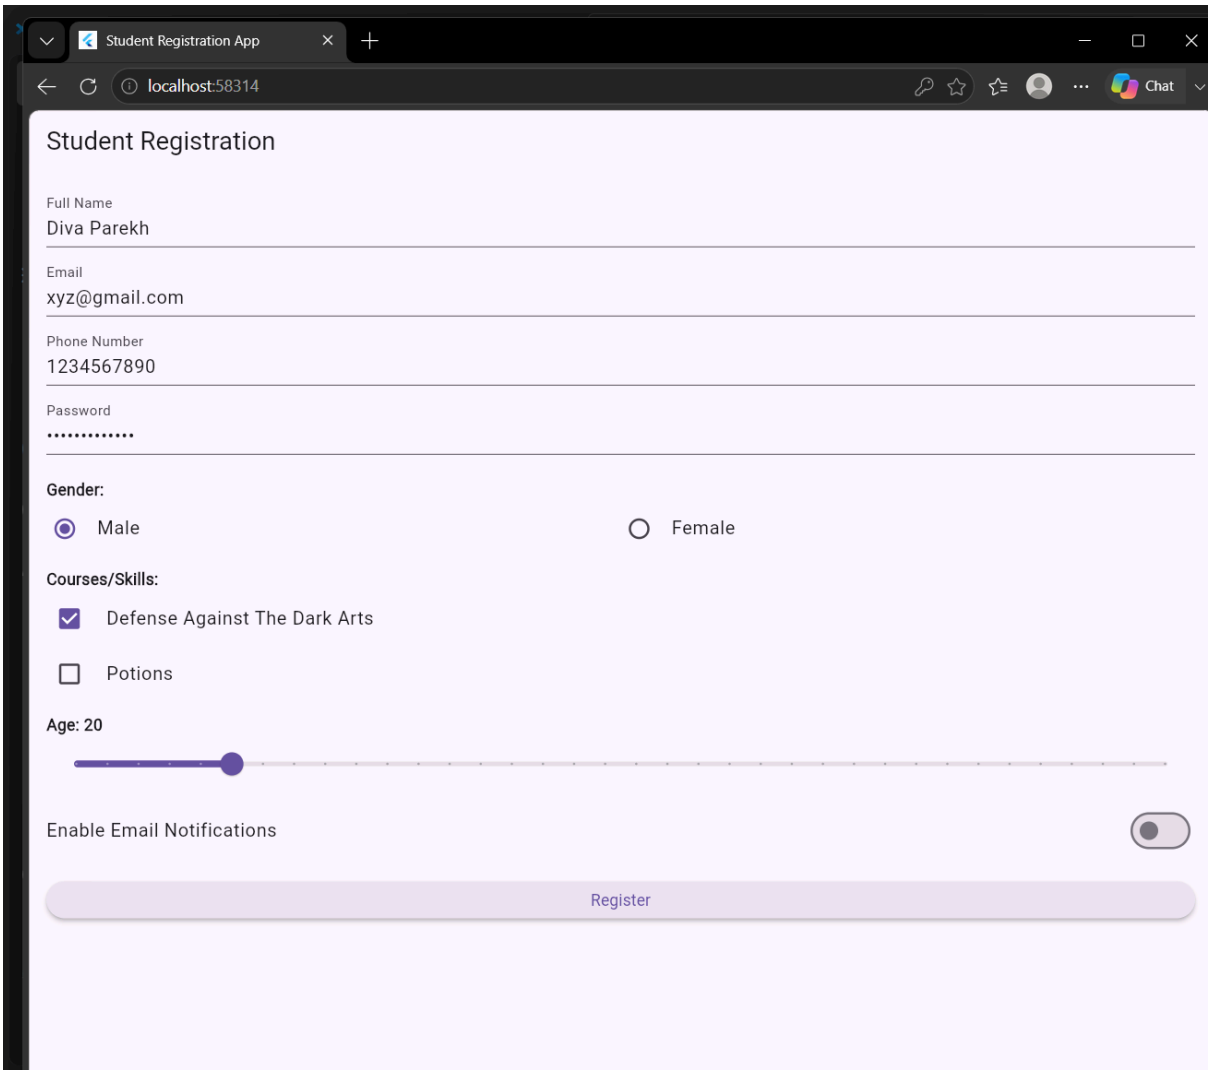

class SuccessScreen extends StatelessWidget {
  final String name;
  final String email;
  final String phone;
  final String gender;
  final List<String> skills;
  final int age;
  final bool notifications;

  const SuccessScreen({
    super.key,
    required this.name,
    required this.email,
    required this.phone,
    required this.gender,
    required this.skills,
    required this.age,
    required this.notifications,
```

```
  });

  @override
  Widget build(BuildContext context) {
    return Scaffold(
      appBar: AppBar(
        title: const Text('Registration Successful'),
      ),
      body: Padding(
        padding: const EdgeInsets.all(16.0),
        child: ListView(
          children: [
            const Text(
              'Submitted Details:',
              style: TextStyle(fontSize: 20, fontWeight: FontWeight.bold),
            ),
            const SizedBox(height: 16),
            Text('Name: $name', style: const TextStyle(fontSize: 16)),
            const SizedBox(height: 8),
            Text('Email: $email', style: const TextStyle(fontSize: 16)),
            const SizedBox(height: 8),
            Text('Phone: $phone', style: const TextStyle(fontSize: 16)),
            const SizedBox(height: 8),
            Text('Gender: $gender', style: const TextStyle(fontSize: 16)),
            const SizedBox(height: 8),
            Text('Age: $age', style: const TextStyle(fontSize: 16)),
            const SizedBox(height: 8),
            Text('Skills: ${skills.isEmpty ? "None Selected" : skills.join(", ")}',
                style: const TextStyle(fontSize: 16)),
            const SizedBox(height: 8),
            Text('Notifications: ${notifications ? "Enabled" : "Disabled"}',
                style: const TextStyle(fontSize: 16)),
            const SizedBox(height: 30),
            ElevatedButton(
              onPressed: () {
                Navigator.pop(context);
              },
              child: const Text('Back to Form'),
            ),
          ],
        ),
      ),
    );
  }
}
```

FINAL APP OUTPUT
